

## CDRIntell

### What is CDRIntell?

Health Intelligence provides a service to assist NHS organisations manage Long Term Conditions (LTCs) and meet targets set within the World Class Commissioning Assurance Framework through an advanced secure browser based information management solution – CDRIntell.

### CDRIntell supports PCTs and GPs in meeting a wide range of health improvement initiatives through:

- Improved diagnosis
- Population based Risk Stratification profiling
- Review of services against evidence based standards
- Identification of patient need
- Evaluation of initiatives, monitoring their effectiveness and outcomes
- Supporting GPs to improve health outcomes

### Benefits for PCT and Practice Based Commissioning Groups/Clusters

#### CDRIntell enables commissioners to:

- Monitor health inequalities and supports strategies to reduce inequality
- Understand the challenges and needs of their patients and populations
- Profile patients using risk algorithms and LTC levels
- Monitor progress against local delivery plans
- Monitor progress against the standards set within National Service Frameworks
- Identify opportunities to reduce duplication and fill service gaps

### Benefits for General Practice, community and hospital based providers

#### CDRIntell enables providers to:

- Focus on those that require an intervention through those with a LTC, who have stopped returning for their medication
- Improve diagnosis, outcomes and reduce duplication, by highlighting patients likely to have a given condition
- Improve the appropriateness of services provided, through being informed of missing data held by others about your patients e.g. key events, inpatient stays, medication that the patient has been prescribed, etc.
- Benefit from a more co-ordinated approach, General Practice, for example, will be informed of all secondary care and community interventions
- Powerful call and recall programme management functionality supports, for example, annual diabetic retinopathy screening and CVD Prevention
- Clinical team leaders (in hospitals and General Practice) receive tools for clinical governance, and also for the review of quality, prescribing and resource allocation

Our solution has a proven impact on changes to patient behaviour and patient health, validated by extended and renewed service contracts with PCTs and is now available through SCC catalist.

## CDRIntell - The Approach

- Patient/client records are maintained in a format suitable for analysis
- Provision of **cross sector reporting**
- Evaluation of health interventions
- Information is presented in relevant and helpful formats
- Register created from a complete GP patient population base
- Patient identifiable data is collated, validated and integrated from clinical systems – handling the complexities of multiple coding systems

## Features & Benefits

- Opportunities for positive intervention in patient care
- Risk profiling
- Identifying missing patient data
- Reporting against standard of care (e.g.) National Service Frameworks
- Performance reporting – giving comparable information
- Powerful web based reporting and programme management solution
- Cross sector solution, enabling 360 view of patient record
- A series of powerful **Dashboard Reports**
