

## CVD Primary Prevention Module

Helping manage patients at risk of Cardio Vascular Disease

*"The Answer to  
Vascular Checks!*

*CDRIntell  
calculates patients  
Cardiovascular risk  
with existing data  
from GP Practice  
Clinical Systems  
stratifies those at  
highest risk and  
offers invitations  
within an effective  
call and recall  
systems. In  
summary Vascular  
checks made  
easy!"*

**Dr Angela Haire,  
CVD Lead for  
Walsall tPCT**

**CVD Primary Prevention Module** is one of a range of Managed Care Programmes available through CDRIntell. This supports a systematic approach to population based interventions.

CDRIntell is a powerful browser-based, cross sector solution, which exports patient data from General Practice Clinical systems and provides PCTs, PBC Groups and General Practice with a comprehensive analysis, reporting and programme management solution.

**CVD Primary Prevention Module** enables PCTs and GPs to:

- Automatically identify candidates for CVD primary intervention
- Undertake risk stratification
- Invite candidates into a structured programme of care
- Manage invitation, reminder and outcomes reporting
- Manage all exceptions associated with a population based screening / surveillance solution

### Features and Benefits

- Programme Management software supports the identification of patients who would benefit from a CVD Risk Assessment and enables a community wide intervention to be planned, operated and evaluated
- PCT and SHA can view aggregate data and monitor this industrial scale interventions
- Derives the number of Risk Factors
- Calculates a provisional CVD risk score
- Provides a systematic invitation process and handles all exceptions
- Monitors Intervention, Effectiveness & Outcomes
- Organising the recall of patients for subsequent review of their risks, lifestyle and medication interventions
- Flexible and Tailored – (Inclusions criteria for the programme can be flexible. For example all patients with three or more risk factors or a Joint British Society Working Party II (JBS2) CVD risk score above 20%

### **Benefits for General Practice, community and hospital based providers**

Powerful call and recall programme management functionality supports, for example, invitations for those on the CVD Primary Risk Register

### **CDRIntell enables a systematic, structured and population based approach**

PCTs and PBCs are able to confirm for their entire population the progress being made in the care of patients with CVD and those at high risk of CVD. Prevention enabled through this population based approach will not only benefit individual patients it will also reduce hospital utilisation and reduce costs for commissioners

**CDRIntell is currently being used across fourteen PCTs serving a patient population of over 2 million people.**

### **Additional Programme Management Modules:**

- Childhood Immunisation and Vaccination Scheduler
- Referral and Intervention Management
- Population Based Risk Stratification
- Diabetic Retinopathy Screening

### **CVD Prevention Dashboard**

Associated with this CVD Primary Prevention Module is a comprehensive CVD Prevention Dashboard. The CVD Prevention Dashboard rapidly established for a PCT both CVD Primary and Secondary prevention registers.
